SUMMARY

Software Engineer with 1.6 years of professional experience building production-grade full stack applications using React, Node.js, TypeScript, and Python. Strong foundation in RESTful APIs, backend services, data pipelines, and automation. Passionate about building scalable, AI-powered, user-first products in fast-paced startup environments and eager to contribute to platforms like Jerry's AllCar app.

TECHNICAL SKILLS

Frontend: React, HTML5, CSS3, JavaScript, responsive UI development

Backend: Node.js, Express, RESTful API design, server-side logic

Languages: JavaScript, TypeScript, Python, SQL

Databases: PostgreSQL, MySQL, MongoDB, TimescaleDB

Cloud & DevOps: Docker, Docker Compose, AWS concepts, CI/CD fundamentals

Data & Streaming: Apache Kafka, ETL pipelines, time-series data processing

AI & Automation: Python automation, computer vision projects, ML fundamentals

Tools & Practices: Git, Linux environments, Agile development, code reviews, debugging, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer

Erience Solutions

April 2023 – October 2024

- Developed and maintained full stack web applications in production using React, Node.js, and TypeScript.
- Built and optimized RESTful APIs supporting core product features and business workflows.
- Designed reusable backend functions and Python-based automation utilities, reducing manual operational workload by approximately 40 percent.
- Improved backend performance by optimizing database queries and API logic, increasing system reliability under load.
- Collaborated closely with product managers and designers in an Agile environment to ship iterative, user-focused features.
- Participated in code reviews, production debugging, and maintained clear technical documentation.

Node.js Developer Intern

Erience Solutions

January 2023 – March 2023

- Assisted in developing backend APIs and services using Node.js and Express.
- Gained hands-on experience with debugging, testing, and deployment workflows.

Omni Associate (Part-Time)

Walmart Canada

Current

- Work in a fast-paced, customer-facing environment requiring adaptability, teamwork, and clear communication.
- Collaborate with cross-functional team members to resolve issues efficiently and support daily operations.

PROJECTS

PaperOnBoard.in – <https://paperonboard.in>

- Designed, built, and maintained a production web platform used by thousands of students to access academic resources.
- Independently owned development, deployment, and iterative improvements based on real user feedback.
- Focused on backend reliability, performance optimization, and scalable application design.

Hybrid Weather Data Engineering & Analytics Platform – GitHub Repository

- Built an end-to-end weather intelligence platform using Node.js, Apache Kafka, PostgreSQL (TimescaleDB), and Docker.
- Implemented Kafka producers and consumers to process large-scale streaming and batch weather datasets.

- Integrated live data from OpenWeather API and historical datasets from NASA POWER and local weather stations.
- Designed time-series storage using TimescaleDB hypertables for efficient querying and analytics.
- Developed analytics dashboards using Apache Superset and a real-time monitoring UI using EJS with server-sent events.
- Containerized the entire system using Docker and Docker Compose for reproducible deployment.

Vehicle Damage Detection using YOLO

- Implemented a YOLO-based computer vision system in Python to detect vehicle damage from images.
- Worked on dataset preparation, model training, evaluation, and accuracy optimization.

EDUCATION

Master of Computer Science

Algoma University, Canada

Completed December 2025

Bachelor of Computer Engineering

Ahmedabad Institute of Technology, India

Completed 2023

ADDITIONAL INFORMATION

Eligible to work in Canada without sponsorship

Strong interest in AI-powered products, scalable systems, and rapid product iteration
