PROFILE

Highly skilled Software Engineer with expertise in Frontend and Backend. Proven ability to quickly grasp new concepts and technologies. Seeking a challenging role to leverage my diverse skill set and contribute to innovative projects

SKILLS

Programming & Scripting Languages

- Expert: TypeScript, JavaScript (ES6+), SQL, NoSQL

Back-End Development

- Node.js (Expert): In-depth knowledge of building RESTful APIs and real-time applications using Express.js.
- API Design: Extensive experience in designing secure, scalable RESTful APIs with JWT and OAuth2 authentication.
- Web Scraping: Proficient in using Selenium, Cheerio, Axios, and integrating proxy servers for efficient and scalable data extraction.

Desktop Application Development

Electron.js: Skilled in building cross-platform desktop applications using Electron.js, integrating native system features, and delivering a seamless user experience.

Databases

- MongoDB (Expert): Strong command of aggregation, indexing, and schema design for high-performance data retrieval.
- SQL (PostgreSQL, MySQL): Skilled in complex query optimization, stored procedures, and data modeling.
- Database Management: Expertise in database replication, sharding, and performance tuning.

Devops & Cloud

- Docker: Deep understanding of containerization, Docker Compose, and multi-stage builds for efficient deployments.
- CI/CD (GitHub Actions): Proficient in setting up automated pipelines for build, test, and deployment, including integration with Docker.

Technical Analysis & Trading Systems

- Multithreading for Technical Analysis: Expertise in implementing multithreaded calculations for technical indicators such as Relative Strength Index (RSI), Moving Average (MA), and Simple Moving Average (SMA) for efficient, real-time analysis.
- TradingView, Binance API, and CCXT: Experienced in integrating TradingView APIs for alerts, as well as Binance API and CCXT for cryptocurrency trading, including real-time data analysis and automated trading strategies.

Version Control & Collaboration

- Git & GitHub (Expert): Mastery in version control, branching strategies, and collaborative workflows With GitHub Actions for CI/CD.
- Agile Methodologies: Familiar with Agile, Scrum, and Kanban for effective team collaboration and project management.

Other Tools & Technologies

- API Testing: Proficient in using Postman and Swagger for robust API testing and documentation.

EMPLOYMENT HISTORY

Apr 2023— Oct 2024	Software Enginner, Erience Solutions	Ahmedabad
Project - olympustrade		
•Developed a system that processes buy and sell signals by creating separate worker processes for each user, ensuring timely trade execution at the signal price. This solution optimizes order processing speed - Engineered asophisticated trading bot utilizingRSIandMA algorithms for Olympustrade.ai, automating trading strategies and optimizing investment returns. •Developed a dynamic Price Alert System enabling users to set customized price thresholds for real-time alerts, enhancing user experience and facilitating timely decision-making. - Implemented WebSocket technology to stream live price data, ensuring accurate and up-to-date information for informed trading decisions. - Designed and integrated a Telegram bot with Binance APIs, enabling users to execute direct buy/sell cryptocurrency transactions seamlessly through the Telegram platform, enhancing accessibility and convenience. - Utilized npm packages including ccxt, Binance API, nodemailer, and JWT to streamline development processes, accelerating project delivery and improving efficiency. •Software is used by over 1000 users.		
Project - Accurate - https://beta.accurateai.in/		
- Developed software for managing crucial client data, including KYC and demat requests, for AccurateAI. - Designed a system to handle daily uploads of thousands ofrecords from CDSL and NSDL and generate reconciliation reports. - Integrated a robust analytics module, reducing the team's workload by 50%. - Software is used by over 100 users.		
Project - Benpos Visualizer - (https://github.com/erience/benpos-visualizer)		
- Developed an Electron-based data visualization tool to process raw weekly data from CDSL and NSDL. - Converted raw data into a human-readable format, simplifying complex financial data for decision-making. - Enabled data comparison between two weeks to trackshare buying and selling trends, showing open, buy, sell, and Close statuses. - Provided critical analytics, such as state-wise buying trends and age group distributions, to aid in strategic decision-making.		
Jan 2023 — Mar 2023	NodeJS developer Intern, Erience Solutions	Ahmedabad
Project - ErienceX Alert System		
Developed a real-time cryptocurrency alert and trading system supporting Binance and KuCoin exchanges. Users can set price thresholds, and the system sends instant notifications via email, Telegram, or web when the price is reached. Utilized WebSockets to stream live data from both exchanges, ensuring efficient real-time price updates. Implemented multiple instances and threads for individual user alert management, providing timely notifications. Integrated a payment system, offering one free active alert while all additional alerts are part of a paid service. The system optimizes resource usage by streaming data once and distributing it to other system components efficiently.		
Binance Telegram Bot (part of ErienceX Alert System)		
1.Direct Trading Functionality: Users can buy or sell cryptocurrency directly from the Telegram bot.		
2.Trading Configuration: The bot allows users to:		
- Set leverage - Define buy/sell price - Customize other trading parameters for a tailored trading experience.		
Jun 2022 —Jul 2022	Html , css developer intern, Softcoding Solutions	Ahmedabad
Created a portfolio website with html, css and javascript		
Jul 2020 — Oct 2020	Graphic Designer Intern, Depixed Media	Ahmedabad
Designed engaging social media images and videos for Reborn Mask, a Canada-based company specializing in high-quality masks. Focused on creating visually appealing content to boost brand awareness and customer engagement.		

EDUCATION

Jan 2025 — Dec 2025	Master in Computer Science, Algoma University,Saut ste marie
Jul 2020 — May 2023	Computer Engineering, Ahmedabad Institute of Technology, Ahmedabad CGPA - 7.8
May 2017 — Apr 2020	Electrical Engineering, Government polytechnic Ahmedabad, Ahmedabad CGPA - 7.22

EXTRA-CURRICULAR
ACTIVITIES

Event Management Software

The project is about intercollege management of events, faculty can upload events and students can participate by filling the form.

Created MiddleWares to authenticate the data in backend, store details in DB and also sent confirmation email,

Skills NodeJs, MongoDB, ExpressJs, EJS.

PERSONAL PROJECT

Paperonboard.in

Build awebsite for the students to download question paper of GTU past papers, which is currently used by thousands of students. Skills - Google Analytics, php, mysql, hosting

SKILLS

NodeJS	HTML/CSS/JavaScript
MongoDB	mysql
Express.js	typescript
JavaScript	electron.js
EJS	ReactJs
